

I've learned that I can't see
the stars and constellations
because the light from the sun
is so bright that it washes
out the light from the stars.
I've also learned that the
stars are much closer to me
than I thought they were.
Some are only a few light
years away, while others are
billions of light years away.
It's amazing how much there is
out there in space. I can't
wait to see all the other stars
and constellations that I
haven't seen yet. I want to
know everything about space.
